HTML CSS Tailwind CSS Javascript React JS Redux-Toolkit Next JS Node JS

Express JS Mongodb

PROJECTS

MERN Stack Pinterest-Clone

Technologies: MongoDB, Express.js, React.js, Node.js, JWT, Cloudinary, Tailwind CSS

- Developed a Pinterest clone application using the MERN stack, allowing users to signup, login, create, update, and delete pins, post comments, and follow other users.
- Implemented JWT-based authentication for secure user login and session management.
- Utilized Cloudinary for efficient image storage and management, facilitating seamless image uploads and handling.
- Integrated Axios for making API requests, ensuring smooth communication between the frontend and backend.

- Employed React Context API for state management, providing a robust and scalable way to manage global state across components.
- Designed a responsive user interface with React.js, optimizing the user experience across various devices.
- Built a RESTful API with Express.js and Node.js to manage backend logic, data operations, and user interactions

Responsive Food Order Website using React JS. { [link](#) }

Technologies: React.js, Redux Toolkit, Tailwind CSS,

- Developed a food ordering application with name of BuyTaste using React.js, allowing users to search for food by category, view detailed information about specific food items, and manage their cart.
- Implemented Redux Toolkit for state management, providing an efficient and scalable solution for handling global state across the application.
- Enabled dynamic routing with React Router to display detailed information for selected food items, enhancing user navigation and experience.
- Designed an intuitive user interface that supports adding and removing food items from the cart, improving the overall user experience..

Movie Land Website using React JS & Tailwind CSS. { [link](#) }

- A single page website where you can search movies by their titles.
- Showing movies's thumbnail and titles using fetch Api method of React JS.

Counter App using React Js & Redux Toolkit. { [link](#) }

- User can perform increment, decrement, plus and subtract operation on given or inserted number.
- User can also toggle privacy.
